

2010 Undergraduate Summer Studentship Information

Students seeking an "Undergraduate Summer Studentship" award must contact potential supervisors directly, and solicit their help in completing the application process (see Grants & Awards Guide). Below is a list of child health researchers and their areas of interest.

Students are encouraged to seek more than one source of funding to improve their chances of support. Other sources include other non-profit Foundations with interests in specific disease areas, the Manitoba Government's CareerStart program, and the Federal Summer Work Experience program. Details of the government programs can be obtained from the Student Employment Office.
